### Peer-to-Peer Learning:

- IPSCM-INDIA has various COP (Community of Practitioners) groups over WhatsApp.
- We also organizes seminars & other events too, which help one to build and expand their professional network.

## What Will I Study?

The SCM Learning System covers four modules which are its key components. On completion of each module one is entitled to get International Certificate in Supply Chain Management. The program addresses all key concepts to lead supply chain function. You will learn the latest best practices to elevate your job performance and help you take advantage of Industry 4.0 technologies. The knowledge you gain through these materials will help you to drive improvement in your organization, maximize the efficiency of planning and operations, and improve the bottom line and revenue

Each learning module is available in print learning system. Progress check questions are included at the end of each chapter to ensure that you are retaining the information before you proceed to the next chapter.

### Module 1: Strategy and Planning

Accurate forecasting of supply, through useful and practical tools, converts demand into clear targets that are aligned with overall enterprise objectives. This module helps participants understand the importance of effective supply chain management by turning market and customer demand into strategies and plans. The module also gives practical advice on how to measure and evaluate performance.

#### Skills and competencies:

- Identifying strengths and weaknesses in enterprise planning;
- Using tools to set targets and objectives in purchasing, operational and logistics strategies; and,
- Performance evaluation.

### Module 2: Sourcing

Understanding supply markets and correctly specifying products and services means knowing what is required and sourcing from suitable suppliers with necessary capabilities. This module helps enterprises develop supplier relationships, select and negotiate the best offers, and manage contracts / risks in a cost-effective manner. It enables participants to specify needs, analyze supply markets and source from suppliers in a cost-effective and sustainable manner.

#### Skills and competencies:

- Specifying requirements;
- Analysing supply markets;
- Appraising suppliers;
- Obtaining and selecting offers;
- Negotiating; and
- Contracting

### Module 3: Operations

Effectively managing operations is key for improved productivity and competitiveness. Processing and manufacturing operations are also closely linked with procurement and sales / marketing. This module explores the transformation of purchased material into final products and services that meet customer and market demand. This relies on a number of factors, including quality management, waste reduction, value added product / process design, layout, environment management and planning / control to ensure sustainable and competitive operations.

#### Skills and competencies:

- Operations and inventory management;
- Environmental procurement;
- Managing finance along the supply chain.

### Module 4: Logistics

Efficient inbound logistics, internal distribution, warehousing, outbound logistics and export of goods and services can reduce cycle times, optimize inventory levels, reduce waste, lower costs, and enhance delivery performance, leading to improved competitiveness. This module addresses the management of storage, distribution, transportation and delivery of material and products.

#### Skills and competencies:

- Managing logistics in the supply chain;
- Inventory management;
- Customer relationship management.
